BASIC-ABSTRACT:

NOVELTY - A multi-function audio system including television is provided which has radio and telephone functions to give a variety of information to users and offer entertainment to the users.

DETAILED DESCRIPTION - A multi-function audio system including television has a hole(22) formed in a lower case(21) of a main body(20) containing a circuit portion, a guide bracket(50) which is inserted into the hole and has a guide projection(51) at the flange and a fixing plate(40) mounted on the guide bracket. The audio system further includes a rotating member(60) having a support projection(61) and a combination protrusion(62) corresponding to a combination hole(42) formed in the fixing plate(40). The audio system also has a fixing bracket(70) and a monitor(30). The fixing bracket is hinge-combined with the rotating member and has a combination piece(72) that is slidably combined with a combination member(31) formed on the top of the monitor. The fixing bracket further has a terminal connected to a wire extended to the outside through the fixing plate, guide bracket, rotating member and

through-holes(43,53,63). The monitor has a terminal(32) corresponding to the terminal of the fixing bracket.
